ABSTRACT

An optical connector adapter comprising a housing, and a The housing has at least one pair of latch inserts. passage formed therein for receiving a pair of connectors adapted to be mated to each other inside the housing. The pair of latch inserts are located in the passage of the housing. Each latch insert is adapted for locking a corresponding connector from the pair of connectors to the housing. At least one latch insert from the pair of spring loaded projection. latch inserts has a housing has at least one detent formed therein. The spring loader projection on the at least one latch insert is bias into the at least one detent locking the at least one latch insert to the housing.
